- **Model:** 30-622
- **Rozmiar koła ("):** 28
- **Szerokość cale:** 28
- **Typ wentyla:** rowerowy (DV)
- **Długość wentyla (mm):** 40
- **Szerokość:** 700
- **Waga:** 300
- **Kolor:** czarny
- **EAN (GTIN):** 8718964145935

Informacje o bezpieczeństwie

List of tyre and bicycle inner tube safety warnings based on the requirements of General Product Safety Regulation (EU) 2023/988 (GPSR): * Tyre selection: Make sure that the tyre size complies with the rim size of your bike. The wrong size can lead to an accident. * Pressure: Always pump tires to the pressure recommended by the manufacturer, which is stated on the side of the tire. Too low or too high pressure can affect driving safety and increase the risk of tire damage. * Tire condition: Regularly inspect tires for damage, such as cuts, cracks, or bulges. Damaged tyres should be replaced immediately. * Installation: Make sure that the tire is properly mounted on the rim and that the inner tube is not twisted or snapped between the tire and the rim. Incorrect installation can cause sudden air descent and loss of control over the bike. * Terrain Type: Use tires designed for the type of terrain you're driving on. Road tyres are not suitable for off-road driving, and off-road tyres can

wear out faster on asphalt. * Weather conditions: Take special care when driving in the rain or wet conditions, as the grip of the tires is reduced. * Replacement: Replace your tires regularly, even if there is no damage to them. Rubber ages and loses its properties, which affects driving safety. * Tubes: Use inner tubes that are suitable for your tire size. Do not use one inner tube in tires of different sizes. * Tube Patching: Repair inner tubes according to the manufacturer's instructions for the repair kit. Make sure the inner tube surface is clean and dry before applying the patch. * Storage: Store tires and inner tubes in a dry and cool place, away from direct sunlight and heat sources.
